### DETAILED ACTION

The instant application was filed as a 371 application with pending claims 1-8. Claims 3- were amended in Paper No. 8 dated December 19, 2001 and the amendment was entered of record. The priority document dated December 19, 2001 has been entered of record. The IDS filed as Paper No. 3 dated December 19, 2001, Paper No. 5 dated April 10, 2002 and Paper No. 9 dated September 2, 2002 have been reviewed and made of record.

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Appropriate correction is required.

The disclosure is objected to because of the following informalities: The phrase "1.5-25 m<sup>2</sup>/g" and "2 m<sup>2</sup>/g" at line 11 of page 12 should be corrected to coincide with instant claims 1 and 2.

Art Unit: 1714

The Brief Description of the Drawing should be corrected at page 11 to list each of Figures 3 individually and each of Figures 8, 9, 10, 11, and 12 individually. Figure #e and Figure 4 of the drawing should be corrected because each appear to be separate individually drawings.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The crystalline density and the empirical formula are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The disclosure at page 14 in Table 4(a) for the crystalline density and the disclosure at page 18 in Table 5 for the empirical formula demonstrate that said particular features were considered essential by the applicant, are not reflected in the claims which are rejected.

The claims if amended to overcome the 112 issues would be allowable over the prior art made of record.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure for teaching a process for pyrolysis of cellulose materials of the same nature as those of the instant claims.
